}

```

The screenshot shows an IDE with a Java file named `Mainmethod.java` and its execution output in the terminal. The code defines a package `Healthcare` and a class `Main` with a `main` method. The output shows the program running successfully, displaying a welcome message and a menu of options for the E-Healthcare Management System.

```

package Healthcare;
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.println("Welcome Admin login");
        System.out.println("Enter Your login details");

        // }
    }
}

```

```
}  
  
}  
  
// }
```

DATABASE RESULT

The screenshot displays the MySQL Workbench interface. On the left, the 'SCHEMAS' pane shows a tree view with 'healthcare' selected, containing tables like 'appointment', 'doctor', 'login1', 'patients', 'payment', 'report', and 'vaccine'. The main editor shows a SQL script with the following queries:

```
6 use healthcare;  
7 alter table Doctor add primary key (dr_id);  
8 alter table Doctor auto_increment=101;  
9  
10  
11 insert into Doctor values(101,"dr.Rawat","dentist","10:00am TO 5:00 pm","ujjain",8946358383,1012 );  
12 insert into Doctor values(103,"dr.yadav","surgeon","6:00 pm TO 10:00pm","pune",9091236922,1036);  
13  
14  
15 alter table Doctor  
16 add column contact long ,add column dr_password int;  
17 update Doctor set contact=6162683525 ,dr_password=1055 where dr_id= 105;  
18 select * from Doctor;
```

The 'Result Grid' shows the output of the last query, displaying a table with columns: dr_id, dr_name, dr_special, available_time, dr_city, contact, dr_password, and dr_fees. The data rows are:

dr_id	dr_name	dr_special	available_time	dr_city	contact	dr_password	dr_fees
101	dr.Rawat	dentist	10:00am TO 5:00 pm	ujain	8946358383	1012	500
102	dr.sharma	General surgery	1:00 pm TO 7:00pm	delhi	7857426922	1024	600
105	dr.yadav	general	11:00am TO 5:00pm	indore	987653546	1015	1000
107	dr.ronak	general phigician	12:00am TO 5:00pm	indore	876534676	1017	1500

The 'Output' pane at the bottom shows the execution log with timestamps and messages for each query, indicating successful execution and row counts.

The screenshot shows an IDE with the following components:

- Left Panel:** A sidebar with icons for Variables, Watch, Call Stack, Breakpoints, Registers, Memory, and Disassembly.
- Editor:** Displays the Java code from the previous block, with line numbers 1 through 44. The code is for a healthcare management system.
- Terminal:** Shows the execution output of the program. It starts with a Windows PowerShell prompt, followed by the command to run the Java application. The output shows the program's execution flow, including user input and system messages.

Terminal Output:

The screenshot shows an IDE with a Java project named 'Healthcare_project'. The code in the editor is as follows:

```
1 package Healthcare;
2
3 import java.util.*;
4
5 public class Admin {
6     // public static
7     // login
8     //
9     //
10    static Scanner
11    static boolean
12
13    // ask you
14    static void Ad
15    try {
16
17    while
18    {
19        System.out
20        if
21        {
22        }
23    }
24    }
25    }
26    } catch (E
27    {
28        System
29    }
30    }
31    }
32    static void In
33    {
34        int ipatname
35        int ipass
36        boolean v
37        // Scanner
38        System.out
39        System.out
40        System.out
41        int ipatid
42        System.out
43        int login
44    }
45 }
```

The terminal output shows the execution of the program:

The IDE interface includes a menu bar (File, Edit, Selection, View, Go, Run, Terminal, Help), a toolbar, a sidebar with project and file views, and a bottom status bar showing the current file path and encoding.

Patients

```
// E-HealthCare-Management-System is a console based application which is built using java.
// This application helps in management of Patients, doctors, admin in a easy and
comfortable way.
// using this Application patients can quickly Sign up, Login, view his/her profile, view
doctors, book Appointment,
// view Report, choose doctor, view Appointments, give feedback, pay online and logout.
Admin can add Doctors,
// view patients list, view Doctors list,remove doctors, see feedback given by
patients,view reports,logout.
// Doctor can login, view profile, viewAppointments, Attend Patients and logout.
